- SQL SERVER ANALYSIS SERVICES
- TEAM FOUNDATION SERVER
- AZURE DEVOPS
- ASPOSE
- REDUX
- REACT

ABOUT ME

I'm a software developer from my fifteen years old (I saw a computer and falling in love, like every person of my kind). In 2005 I learnt Visual Basic .NET, from there, my way has been learning more to be a better developer and contribute to other teams to make it too, with the Microsoft Stack mainly.

During my experience, I have the chance to study 6 careers, understanding that build a software is a culture of continuous learning, the technology is a medium, where the internet is the main resource of knowledge.

After almost 20 years working professionally. I have been put in practice many technologies, always looking for a solution of a big problem, taking decisions constantly. Not all of them has been precise, but every mistake has been the greatest and strong learning I ever had. The resolutions of a lots of big problems in my career is what make strong when I take up a major challenge.
